Abstract

This research was aimed at exploring the revitalization of (1) security value system of integrated life environment of the Republic of Indonesia, (2) geographic awareness values, and (3) traditional law values. The research made use of qualitative method. Data collection was conducted through indepth interview, observation, focus group discussion, and group study. Data analysis was done simultaneously with data collection process (on going analysis). The data analysis process included examination, selection, categorization, evaluation, comparison, synthesizing, and contemplating the coded data done cyclically for the sake of establishing inferences, testing them and drawing conclusion. This research provides two important implications. *Firstly*, wider access must be made in order to understand local values and principles, which should not be interpreted as equal to narrow concept of pre-mordialism. *Secondly*, this understanding must be approached through enviromental science and human ecology.

Keywords: revitalization, environmental wisdom, sustainable development.
